CS 402

Project 1

Create an app that allows a user to input several pieces of data and displays that data in a list.

Requirements

1. Initial screen will be a table view, listing each piece of that data.
2. There will be another view controller that allows additional data input.
3. Use Core Data to store the data.
4. Data must persist between app launches.

Grading

Completing all requirements gives a base score of 80%. To achieve a higher score, add additional content, interactivity, design or extra details to the app. The more, the higher the potential grade. Additional ideas will be presented in class. The requirements are purposely left vague in order to demonstrate and develop creativity, as well as having an app you could potentially use yourself.
